RESEARCH AND SCHOLARSHIP

MAJOR RESEARCH INTERESTS

Dr. Meyerson’s research interests include public health policy and systems to advance population health with focus on harm reduction and sexual health. Her research is oriented as translational to program and policy through the application of implementation science and community-based participatory and action research (CBPAR). Dr. Meyerson’s CBPAR orientation involves working with community partners to develop their own capacities to engage in citizen science – designing and implementing research projects and interpreting study findings. Dr. Meyerson’s systems research includes the identification of need and opportunities for system expansion to improve access to harm reduction and sexual health services. Examples include the evolution of pharmacy practice to assure nonstigmatized harm reduction services such as PrEP for HIV prevention, syringe sales, OUD medications dispensing and naloxone stocking and dispensing or health care provider treatment of people who use drugs. Policy research includes the impact of federal policy change on MAT/MOUD access, the impact of evidence ambassadors and evidence-based policy communication on policy decision making; and broadly, policy behaviors and their measurement, particularly by public institutions including studies of state STD investment, local public health accreditation, reported policy behaviors of state STD programs and local health departments, country-level policy planning, and policy adoption for syringe access. Dr. Meyerson has been highly engaged with legislative and administrative policy partners to translate research to policy development to improve community health.
